Dr. Joshua Lederberg
Department of Genetics
The Medical School
Stanford University
Stanford, California 94305

Dear Professor Lederberg:

The Executive Committee of our Department will soon present Dr. Thomas C. Nelson to the Science Division for promotion to associate professor.

It would be very helpful to us and to the Division if you would write me a letter giving us your opinion of Dr. Nelson.

At the present time, Tom is working on the disassociation and reassociation of bacterial and plastid membranes and we are trying to confirm some of his interesting work with electron microscope studies. We hope this combination will help us understand a little better about membrane structure.

I know how very busy you must be and certainly will appreciate word from you about Tom.

Sincerely yours,

Douglas W. Dunlop, Chairman
Department of Botany

DWD/mba
